

SEEMP SURVEY

STUDY ON THE IMPLEMENTATION OF THE IMO SHIP ENERGY EFFICIENCY MANAGEMENT PLAN (SEEMP) FRAMEWORK

This survey is conducted by World Maritime University (WMU) and the Future Fuels and Technology project of the International Maritime Organization (IMO) to facilitate the review of the short-term GHG reduction measure. The purpose of this survey is to investigate the effectiveness of SEEMP with attention paid to its three components, namely the management plan (part I), data collection (part II), and CII calculations and rating (part III).

We would like to hear from all stakeholders. As a result, stakeholders are divided into three groups (G1, G2, and G3), with questions tailored to each group. To access the survey, please select one of the provided links according to the category of stakeholder.

QUESTIONNAIRES

G1: Policy making (legislation) and policy execution (regulatory) bodies, including:

- Flag administrations- member state delegations- PSC- Classification societies
- [Link to survey](#)
